Blaine & Cleveland

Curb Replacement & Pavement Rehabilitation

A project to replace curb and gutter on Blaine Street and Cleveland Boulevard, from 10th Avenue to 22nd Avenue, is under way.

During construction, traffic will be periodically reduced to one lane. Work is scheduled on each roadway independently, though some construction activities may be performed simultaneously, creating traffic restrictions on both Blaine and Cleveland for a short time. **Some street parking will be temporarily eliminated as the project progresses.** Signs will alert motorists in advance of parking restrictions.

The project also will improve drainage and eliminate dips at side street intersections. Work is expected to last approximately three months.

Following completion of curb and gutter replacement, work will begin on a companion project on Blaine and Cleveland, from 10th Avenue South to just east of South Florida Avenue. The project will reconstruct the roadway and pave to the edge of the new curb and gutter. During the roadway rebuild, parking and lane restrictions will also be necessary. To expedite the project, crews will work an aggressive schedule, which may include some night and weekend work. Additional details will be forthcoming as this project nears.

Access to residences and businesses will be maintained during both projects. Completion is scheduled for late 2007.
